

Pediatrics Day & Night Immunization Policy

Childhood immunization was one of the greatest advances in public health in the 20th century. It has saved millions of children and adults throughout the world from developing meningitis, encephalitis, brain damage, severe respiratory problems, poliomyelitis, paralysis, and other severe illnesses, which can require hospitalization or cause death. And to this day, childhood immunization remains a cornerstone of pediatric care and public health.

Immunizations are most effective when an entire community participates. In recent years, localized outbreaks of mumps, measles, whooping cough and polio have occurred in the United States in communities with low vaccination rates. When you immunize your child, you are not only protecting your child from serious disease but you are also helping to protect your entire family, your friends and your neighbors.

At Pediatrics Day & Night we strongly believe in the importance of immunizations and fully support the childhood immunization schedule established by the American Academy of Pediatrics. Therefore, **our policy requires that every patient within our group receive the vaccinations listed below:**

By 18 months of age, your child will receive the following:

Type of Immunization

Hepatitis B: 3 doses

Diphtheria, Tetanus and Pertussis (DTaP): 4 doses

Inactivated Polio Vaccine (IPV): 3 doses

Haemophilus influenza (HIB): 4 doses

Pneumococcal conjugate vaccine (Prevnar): 4 doses

Varicella vaccine (Chicken Pox): 1 dose

Measles, Mumps and Rubella(MMR): 1 dose

Hepatitis A: 2 doses, beginning at 18 months of age

By the age of 5 years your child will receive these additional vaccines:

A fifth dose of **DTaP**

A fourth dose of **IPV**

A second dose of **MMR**

A second dose of **Varicella (Chicken Pox)**

For Preteen/Teens: 1 dose of **MeningococcalVaccine**, and 1 dose of **Tetanus, Diphtheria, Pertussis (TdaP)**.

In addition, we highly recommend (but do not require) the following vaccinations:

Influenza vaccine: 2 doses first year received and 1 dose annually; 3 doses of **HPV vaccine (Gardasil)**

We are aware of the concerns about vaccine safety that has been voiced by a small minority. These claims have no scientific or statistical basis. To date, there have been over 30 scientific studies, which have proven, conclusively, that vaccines are safe.

By signing, I agree to follow Pediatrics Day & Night's policy to fully immunize my child by 18 months:
